Full-stack developer with a backend-first mindset, skilled in API design, database modeling, and query optimization. Experience building production-grade systems across the full stack using Node.js, PostgreSQL, and React with hands-on work in AI-powered pipelines and background job architectures. I love picking up new technologies quickly, going deep fast, and translating complex problems into clean, scalable solutions.

TECHNICAL SKILLS

- Languages:** JavaScript, TypeScript, C++
- Frontend:** React.js, Next.js, Redux Toolkit, Zustand, TailwindCSS, ShadCN, HTML5, CSS3
- Backend:** Node.js, Express.js, REST APIs, GraphQL, WebSockets
- Databases:** PostgreSQL, MongoDB, Redis, Prisma
- DevOps & Tools:** AWS, Git, GitHub, Docker, BullMQ, CI/CD, Jest
- System Design:** API Design, HLD, Scalability, Caching, Data Modeling, Background Jobs, Fault Tolerance
- CS Fundamentals:** Data Structures & Algorithms, OOP, OS, DBMS, Computer Networks

PROJECTS

Lucy: AI Developer Assistant Platform | [GitHub](#)

- Built a developer learning platform that auto-ingests YouTube/article content and converts it into structured notes and flashcards using the Gemini LLM.
- Engineered a transcript extraction pipeline that identifies key architectural patterns and generates markdown — reducing manual note-taking to zero.
- Solved sync reliability by building an automated GitHub API integration that pushes generated content directly to users' Obsidian vaults seamlessly.
- Processed 50+ learning resources during testing with ~85% pattern extraction accuracy across varied content formats.
- Tech:** Next.js, Node.js, PostgreSQL, Prisma, TypeScript, Gemini API

Resume Intelligence Platform | [GitHub](#)

- Contributed to an AI-powered recruitment system that parses resumes into a normalized central profile and scores candidate fit against job descriptions.
- Engineered a concurrent processing pipeline to handle multiple resume ingestions simultaneously, reducing per-resume processing time significantly.
- Solved normalization of inconsistent resume formats into a unified schema using Gemini API for structured extraction.
- Processed 20–50 resumes during hackathon evaluation with consistent extraction accuracy across varied formats.
- Tech:** React.js, Node.js, Express.js, MongoDB, Gemini API, Tailwind CSS

ACHIEVEMENTS

Winner — HackITM Company Edition | *Hackathon* 2025

- Led a team to build an AI-driven resume intelligence system based on the “One Candidate, One Profile” model, enabling intelligent candidate–JD matching using advanced resume analysis.

Competitive Programming & Hackathon Placements 2025

- Ranked **1st** in Cryptors (100+ participants) — solved complex problem-solving and puzzle challenges.
- Ranked **2nd** in CodeClash — competitive DSA coding contest demonstrating strong algorithmic skills.
- Ranked **2nd** in Labseva Hackathon — built a prototype streamlining blood sample collection with automated SMS/email results.

EDUCATION

B.Tech. Computer Science and Engineering | ITM(sls) Baroda University 2022 – 2026

CGPA: 7.97

CERTIFICATIONS

TakeUForward DSA Course Completion Certificate 2025

- Completed comprehensive Data Structures & Algorithms training, covering arrays, linked lists, trees, graphs, dynamic programming, greedy algorithms, and advanced problem-solving patterns.

Namaste Node.js Certificate — NamasteDev 2025

- Completed in-depth Node.js training covering the event loop, asynchronous programming, streams, Express.js, REST APIs, authentication, databases, and backend architecture fundamentals.
